

May 2025

Product Notification: Intumescent Coatings: IP9189B; IP1897 B; IP1265B (Part B – Catalyst ONLY)

This note serves to advise clients and users of an enforced change to the catalyst component for the above noted Intumescent coatings.

This is due to the withdrawal of a raw material used in the manufacture of these catalysts which was beyond our control.

Our technical team have identified an alternative raw material.
We have obtained samples and produced small batches for full testing.

This new catalyst has shown equivalent technical properties both in curing, technical performance and burn characteristics to the now withdrawn version.

The new catalysts will be coded as follows, to reflect the update of the formulation:

IP9189B-R1
IP1897B-R1
IP1265B-R1

Mixing ratios with the base component remain the same, ie:8 parts part “A” to 1 part, part “B” by volume.

The only difference that will be noted is that the new “R1” versions will be paler in colour.

Deliveries in the short term will be of the old catalyst version to eliminate stocks, but the new “R1” version will start to be despatched in the near future,

Indestructible Paint is committed to developing coatings that comply with evolving legislation, address raw material shortages, and fulfil customer needs.

If you have any queries regarding this enforced change, please contact our sales office or your usual sales contact.
